cbliss8@gatech.edu ❖ (408)-314-3142 ❖ San Jose, CA ❖ carterbliss.com

Objective

Test automation and embedded systems engineer with hands-on experience across firmware, PCB design, and hardware validation, seeking a Summer 2027 internship in systems, hardware, or software engineering.

Education

Georgia Institute of Technology | B.S. Electrical Engineering | E.G: 2028 | GPA: 4.00

- Concentration: Electronic Devices, Robotics Autonomous Systems
- Minor: Computer Science – Intelligence

EXPERIENCE

Systems Engineering Intern – L3Harris Technologies

Jun 2026 – Aug 2026

- Engineered autonomous color calibration software in NI TestStand for the MCDU-R Airbus and B777 DLO table, architected for portability across additional unit types (e.g., ECMDU, CMDU).
- Interfaced system with CS3000, Westar FPM H, and CS200 equipment, executing factory test commands and implementing a CS200 driver in Python for integration to acceptance test procedures.
- Reduced calibration time from **80 hours to 15 minutes**, an estimated **\$11,200 in annual savings** across MCDU-R production pipeline.
- Led design verification testing for AMU CNBP, CMFD, and MCDU-R units: exposed graphics functional failures, eliminated over 100 instances of procedural ambiguity, and authored new color validation procedure.

ECE 2020: Digital System Design Teaching Assistant – Georgia Institute of Technology

Aug 2026 - Present

- Lead **weekly 3-hour** lectures and tutoring sessions for a class of **75 students**, covering fundamentals of processor design, MIPS datapaths, and combinational/sequential logic.
- Partner with professors to lead laboratory experiments and lecture materials, improving student engagement.
- Grade weekly homework, labs, and exams for the full class, providing detailed feedback to help students identify and correct misunderstandings.

Electrical & Firmware Engineer – HyTech Racing

Aug 2025 - Present

- Developed C++ steering sensor firmware on Teensy 4.1 to calibrate, run plausibility checks, and convert ADC values for analog and digital steering sensor; validated with Google Test unit tests across **25+ edge cases**.
- Integrated CAN & Ethernet data transmission to Drivebrain, enabling “Mode 4” motor vehicle dynamics: real-time software adjustments with active torque compensation for high-speed cornering.
- Enabled HTX car to reduce skid-pad time by **~0.2 seconds** due to feedback from steering system into Drivebrain at Formula South 2026.
- Created an FSAE-compliant brake light PCB meeting competition timing standards for team’s electric racecar.

Advanced Prototyping Technical Officer – Materials Innovation Learning Laboratory

Aug 2025 - Present

- Manage, maintain, and troubleshoot material testing equipment to assist undergraduate and graduate students.
- Create standard operating procedures and lead hands-on staffer trainings in Advanced Prototyping Lab.
- Provide hands-on technical assistance to approximately **15 users and staffers weekly**, promoting safe equipment usage and experimental workflows.

Projects

Supercapacitor Experiment Card – Georgia Tech Vertically Integrated Projects

Jan 2026 – May 2026

- Led a 9-person team designing an experiment card for Galvanostatic Charge-Discharge cycling of team-fabricated supercapacitors, sourcing a constant 10 μ A current (LM134Z) with comparator safeguarding and an op-amp feedback loop regulating MOSFETs for linear discharge.
- Designed current/voltage monitoring (INA190, OPA333) for STM32 ADC logging and **validated the full board via LTspice/KiCad simulation and 0-violation ERC/DRC** checks ahead of fabrication.

Steering Firmware & Brake Light PCB – HyTech Racing

Fall 2025

- Designed brake light PCB in Altium Designer: created custom LM555 8-SOIC schematic symbol and footprint from datasheet, laid out RC timing circuit with USB-C power input, **completed full DRC with 0 errors, and assembled board**.
- Implemented steering sensor firmware within HyTech’s VCF codebase in C++; wrote unit test suite using Google Test covering calibration, plausibility checks, and ADC conversion cases.

Skills

- Programming: Python, C#, C++, C, MATLAB, Java
- Software: NI TestStand, Altium, KiCad, LTspice, Blender, Excel, GitHub, Power BI, Glowscript, Tinkercad
- Hardware: Teensy 4.1, STM32, Through-hole & SMT soldering, Breadboarding
- Languages: English(native), Mandarin(proficient)
